

AF-X720

HIGH-PRESSURE PUMP / Industrial Pumps

A high-pressure transfer reference for booster, injection, and process services where pressure stability, materials compatibility, and controlled operation shape the package design.

PLATFORM ROLE	REFERENCE STATUS	DOCUMENT USE
High-pressure process transfer platform	Illustrative project concept	Early engineering conversation

TECHNICAL SPECIFICATION

PARAMETER	REFERENCE ENVELOPE
FLOW RATE	720 m3/h
MAXIMUM PRESSURE	80 bar
OPERATING TEMPERATURE	-10 C to 160 C
MATERIALS	316 stainless steel
EFFICIENCY	Up to 91%

The values above are a reference envelope for concept discussions. Confirm duty, materials, performance, and compliance requirements against the approved project specification before procurement or manufacture.

AF-X720 / ENGINEERING NOTES

HIGH-PRESSURE PUMP / CONFIGURATION FRAMEWORK

The platform is configured around the operating envelope rather than selected from a single catalogue point. Use the prompts below to structure the application review.

DESIGN INTENT AND INTERFACES

ENGINEERING LENS	WHAT TO RESOLVE
Hydraulic intent	Deliver a defined high-pressure duty while keeping operation inside the agreed continuous envelope.
Process attention	Suction stability, pressure transients, relief philosophy, fluid viscosity, temperature, and downstream control response.
Package boundary	Pump, driver, pressure instruments, protective logic, isolation, and commissioning data are coordinated at package level.

CONFIGURATION REVIEW

ENGINEERING LENS	WHAT TO RESOLVE
Pressure path	Define normal and upset pressure, start-up behavior, minimum flow, and the response to a downstream restriction.
Fluid interface	Confirm viscosity, solids, temperature, seal compatibility, and materials for the actual process fluid.
Energy review	Use the stated efficiency as a reference point only; verify the selected duty and control mode against the project energy baseline.

ENGINEERING HANDOFF CHECKLIST

01	Normal and upset pressure cases documented
02	Transient and minimum-flow behavior reviewed
03	Driver, controls, and instrument ranges aligned
04	Pressure test and acceptance basis agreed

REFERENCE NOTE	This document is a polished portfolio reference, not a certified data sheet. Exact performance, materials, interfaces, testing, and applicable requirements remain project-specific and require written confirmation.
