

CX-900

HEAVY-DUTY CONVEYOR / Conveyor Systems

A heavy-duty conveying reference for high-capacity bulk routes where transfer geometry, structural load paths, inspection access, and condition-ready interfaces are part of the system brief.

PLATFORM ROLE	REFERENCE STATUS	DOCUMENT USE
High-capacity bulk handling platform	Illustrative project concept	Early engineering conversation

TECHNICAL SPECIFICATION

PARAMETER	REFERENCE ENVELOPE
THROUGHPUT	Up to 3,500 t/h
BELT WIDTH	1,200-2,400 mm
INCLINE	Up to 18 deg
FRAME	Heavy structural steel
MONITORING	Condition-ready

The values above are a reference envelope for concept discussions. Confirm duty, materials, performance, and compliance requirements against the approved project specification before procurement or manufacture.

CX-900 / ENGINEERING NOTES

HEAVY-DUTY CONVEYOR / CONFIGURATION FRAMEWORK

The platform is configured around the operating envelope rather than selected from a single catalogue point. Use the prompts below to structure the application review.

DESIGN INTENT AND INTERFACES

ENGINEERING LENS	WHAT TO RESOLVE
Routing intent	Move high-volume bulk material through a controlled route with a structural and maintenance strategy sized to the site context.
Layout attention	Transfer energy, chute wear, support loads, incline, belt tension, spillage paths, access, and inspection zones.
Release boundary	Capacity, belt, incline, and frame selections are reference values and must be reconciled with material and civil data.

CONFIGURATION REVIEW

ENGINEERING LENS	WHAT TO RESOLVE
Transfer design	Resolve loading and discharge trajectories, chute geometry, wear strategy, and clean-out access before finalizing the route.
Structural path	Coordinate support spacing, dynamic loads, foundations, walkways, and service access with the approved plant model.
Monitoring	Define the condition signals, inspection points, alarm thresholds, and data ownership that the operating team can maintain.

ENGINEERING HANDOFF CHECKLIST

01	Material, moisture, density, and loading cases documented
02	Transfer, incline, support, and access model coordinated
03	Wear, clean-out, and inspection strategy agreed
04	Monitoring signals and maintenance ownership defined

REFERENCE NOTE	This document is a polished portfolio reference, not a certified data sheet. Exact performance, materials, interfaces, testing, and applicable requirements remain project-specific and require written confirmation.
