

T900

THERMACORE THERMAL SYSTEM / Thermal Systems

A high-temperature thermal reference for larger chambers and demanding heat profiles where atmosphere, refractory strategy, controls, utilities, and recovery must be resolved as a system.

PLATFORM ROLE	REFERENCE STATUS	DOCUMENT USE
High-temperature process heating platform	Illustrative project concept	Early engineering conversation

TECHNICAL SPECIFICATION

PARAMETER	REFERENCE ENVELOPE
TEMPERATURE	Up to 900 C
CHAMBER VOLUME	20-160 m3
FUEL OPTIONS	Gas / Electric / Hybrid
CONTROLS	Redundant PLC
EMISSIONS	Configured to site requirements

The values above are a reference envelope for concept discussions. Confirm duty, materials, performance, and compliance requirements against the approved project specification before procurement or manufacture.

T900 / ENGINEERING NOTES

THERMACORE THERMAL SYSTEM / CONFIGURATION FRAMEWORK

The platform is configured around the operating envelope rather than selected from a single catalogue point. Use the prompts below to structure the application review.

DESIGN INTENT AND INTERFACES

ENGINEERING LENS	WHAT TO RESOLVE
Thermal intent	Shape a repeatable high-temperature profile around load geometry, atmosphere, cycle time, and the site's utility strategy.
Process attention	Refractory selection, heat distribution, extraction, thermal expansion, instrumentation, controls, and service access.
Release boundary	The listed temperature and volume are reference envelopes, not a certified operating claim or emissions guarantee.

CONFIGURATION REVIEW

ENGINEERING LENS	WHAT TO RESOLVE
Thermal model	Build the heat balance around the actual load, openings, cycle, refractory, extraction, and warm-up requirements.
Utility path	Compare gas, electric, or hybrid concepts against available capacity, control response, operating profile, and site requirements.
Controls	Define independent measurements, permissives, alarms, recipes, data capture, and the operator response expected for each state.

ENGINEERING HANDOFF CHECKLIST

01	Load geometry, atmosphere, and cycle cases recorded
02	Heat balance and utility concept reviewed
03	Thermal expansion, refractory, and access interfaces coordinated
04	Controls, alarms, and site requirements documented

REFERENCE NOTE	This document is a polished portfolio reference, not a certified data sheet. Exact performance, materials, interfaces, testing, and applicable requirements remain project-specific and require written confirmation.
