

INSTALLATION & COMMISSIONING

AXIOM ENGINEERING RESOURCE

A field-ready checklist for receiving, installing, testing, and handing over an Axiom system.

01 Receive and inspect

Confirm the equipment, documentation, preservation, and lifting points against the approved packing list before moving the package into position.

02 Install and align

Verify foundations, piping loads, rotation, isolation, instrumentation, and access to service points before energizing the system.

03 Test and hand over

Record dry checks, wet commissioning, alarms, setpoints, and operator training so the approved operating envelope is clear at handover.

This reference is intended to support early-stage engineering conversations. Final selection and compliance requirements remain project-specific.
